Marsh Harrier

Well over 200 Marsh Harriers have been fitted with wing-tags in North Norfolk since 2011 and individuals have been sighted in the UK from Cornwall to as far north as Aberdeen. There have also been sightings in Ireland, Belgium, Germany, Spain, Portugal and the Canaries.

These birds originally had **lime** tags with a code of two letters/numbers. The tags in fact look pale green, a little darker than most lime leg rings. The first series of codes beginning A were in **white** but all subsequent wing-tags have the code in **black**. **Orange** tags with **black** codes were then used and in 2024 **Yellow** tags with **black** codes started being used.

Detailed information on these birds including maps showing the movements of different individuals can be viewed on the NW Norfolk Ringing Group website

Black-tailed Godwit: nominate form *limosa*

In 2015 the RSPB decided to restart colour-ringing chicks and also adults as the UK population was not increasing as had been hoped for. The new scheme again has four tibia rings but the lower right scheme identifier is now a **lime** ring with a **black E** engraved on it. Anyone seeing one of these birds is asked to report the sighting to

Jennifer.Smart@rspb.org.uk

and she will reply with details of the bird ASAP.

Unfortunately the 2015 breeding season was a poor one. Some adults were successfully ringed but only four chicks were and it is feared that none of these chicks survived.

From 2017 birds were "headed-started" by RSPB/WWT. Eggs were taken from the nests of Black-tailed Godwits at Nene Washes (Cambs) then hatched at Welney with the resulting youngsters being released. These released birds all had a dark **Green** ring as the upper right tibia ring in 2017 and a total of 26 were released at Welney. In 2018 the upper right ring for the "head-started" birds was **White** and a total of 38 birds were released, 23 at Welney and 15 at Nene Washes. In 2019 the upper right ring for the "head-started" birds was **Black** and a total of 48 birds were released. No birds were head-started in 2020 due to the coronavirus lockdown. In 2021 the upper right ring for the "head-started" birds was **Yellow** and a total of 43 birds were released. In 2022, the final year of the project, the upper right ring for the "head-started" birds was **Blue** and 51 more fledglings were released making the total for the

project 206. All birds that have been ringed in recent years have been fitted with a PIT tag attached to the tarsus (usually the left) that does not have the metal ring. This “helps to tie a few extra adult identities to nests for some birds which are difficult to observe walking on to nests”.

Youngsters and adults ringed in the wild in recent years have been fitted with a **white flag** on the left tibia with a two-character **black** code and with a **lime** ring with a **black E** engraved on it on the right tibia.

Left leg: **green** over **orange** on tibia, black attachment on tarsus with a PIT tag attached (Passive Integrator Tag used to monitor a bird’s activity at its nest).

Right leg: **white** ring over **lime** ring with black **E** on tibia.
