

Ringed and tagged birds seen in the Cley 10km square 2024

New information this month*.

The Weybourne Atmospheric Station has a Motus Tower fitted there now. Motus is a global radio wildlife tracking system that is widely used in the US and Europe but at the moment there are only a few towers in the UK. Maps showing the details of the birds, mammals and insects fitted with radio tags that have been detected at Weybourne can be viewed at

Red Kite

Wing-tagging of Red Kites commenced in East Anglia in 2015. Those first ringed by Phil Littler in North Norfolk were fitted with **black tags** and **white** codes (the same 2 alpha/numeric on each wing) but **white tags** with **black** codes are now being used.

Phil asks if anyone seeing one of these birds could e-mail him directly on

harriermanphil@gmail.com

and he will reply with details of the bird ASAP.

White-tailed Eagle

Five colour-ringed individuals fitted with satellite transmitters have been seen and satellite plots revealed that another bird has also visited the Square. They come from a project run by

the Roy Dennis Wildlife Foundation in partnership with Forestry England. Nestlings are collected under licence, issued by Scottish Natural Heritage, from nests in Scotland and are translocated to the Isle of Wight in late June. They are then held in a quiet, confidential, location for approximately four-eight weeks before being released. Food (mainly fish) is provided close to the release site during the autumn and winter before the young eagles become independent. The Natural England licence permits the release of up to 60 juvenile eagles on the Isle of Wight over a five-year period from 2019. The first six juveniles were translocated to the Isle of Wight in late June 2019 and all were successfully released in August. A further seven youngsters were translocated and released in 2020 and 12 in 2021. Detailed information on the progress and movements of these birds can be found on the Roy Dennis Wildlife Foundation website <https://www.roydennis.org/> and on their twitter feed <https://twitter.com/roydenniswf>
An individual that was rescued in the Netherlands and colour-ringed has also been seen.

Movements Wintered in N Suffolk.

Marsh Harrier

Well over 200 Marsh Harriers have been fitted with wing-tags in North Norfolk since 2011 and individuals have been sighted in the UK from Cornwall to as far north as Aberdeen. There have also been sightings in Ireland, Belgium, Germany, Spain, Portugal and the Canaries. These birds originally had **lime** tags with a code of two letters/numbers. The tags in fact look pale green, a little darker than most lime leg rings. The first series of codes beginning A were in **white** but all subsequent wing-tags have the code in **black**. **Orange** tags with **black** codes are now being used.

Detailed information on these birds including maps showing the movements of different individuals can be viewed on the NW Norfolk Ringing Group website

<https://www.nwnrg.co.uk/>

Phil Littler asks if anyone seeing one of these birds could e-mail him directly on

Black-tailed Godwit: nominate form *limosa*

In 2015 the RSPB decided to restart colour-ringing chicks and also adults as the UK population was not increasing as had been hoped for. The new scheme again has four tibia rings but the lower right scheme identifier is now a **lime** ring with a **black E** engraved on it. Anyone seeing one of these birds is asked to report the sighting to

Jennifer.Smart@rspb.org.uk

and she will reply with details of the bird ASAP.

Unfortunately the 2015 breeding season was a poor one. Some adults were successfully ringed but only four chicks were and it is feared that none of these chicks survived.

From 2017 birds were “headed-started” by RSPB/WWT. Eggs were taken from the nests of Black-tailed Godwits at Nene Washes (Cambs) then hatched at Welney with the resulting youngsters being released. These released birds all had a dark **Green** ring as the upper right tibia ring in 2017 and a total of 26 were released at Welney. In 2018 the upper right ring for the “head-started” birds was **White** and a total of 38 birds were released, 23 at Welney and 15 at Nene Washes. In 2019 the upper right ring for the “head-started” birds was **Black** and a total of 48 birds were released. No birds were head-started in 2020 due to the coronavirus lockdown. In 2021 the upper right ring for the “head-started” birds was **Yellow** and a total of 43 birds were released. In 2022, the final year of the project, the upper right ring for the “head-started” birds was **Blue** and 51 more fledglings were released making the total for the project 206.

All birds that have been ringed in recent years have been fitted with a PIT tag attached to the tarsus (usually the left) that does not have the metal ring. This “helps to tie a few extra adult identities to nests for some birds which are difficult to observe walking on to nests”.

Black-tailed Godwit: form *islandica*
